## Component Engineer, Cambridgeshire

Our client is a global leader in ink jet and laser technologies offering total coding and printing solutions to a varied industrial customer base. The company is renowned for the quality and reliability of their technology and unrivalled customer support. With a turnover close to £200M and employing over 1700 people worldwide and 8 manufacturing operations, our client sells to over 120 countries. Their success is built on close relationships with customers offering solutions tailored to meet their specific requirements.

To further enhance their position in the industry they are looking for the following key individual who will report direct to the Product Support Manager.

This role will be responsible for identifying and qualifying components and establishing a common set of parts for products. You will work with design teams to identify new technology, identify and qualify common parts for design use and create a regime to identify and manage obsolescence. You will be qualified to degree level, with at least 3 years in a high technology engineering environment.

You will be working with leading edge technology where the highest level of quality of both product and customer service comes as standard. A collegiate atmosphere provides very attractive salary packages, pension provisions and extremely good working conditions including freshly cooked cuisine daily in pleasant surroundings.
